

Study Session Planner App

What does it do?

The Study Session Planner can help students like me stay focused and organized while studying. The app allows you to create a study session, add tasks, set a timer, and track progress. Once the timer ends, the app will display a summary of your completed tasks and the total time you spent.

Target Audience?

The target audience for this app is students across all grade levels who want to manage their time better and avoid distractions on their phones. It's especially useful for people who like to see and check off tasks as they progress.

How do you use this app?

The user will open the app to create a session, enter what they need to study, set a timer for how long they want to study, and then start the session. As the student finishes each task, they will mark it complete, and once the timer runs out or once they complete all the tasks, the app gives them a quick summary of what was done in the session.

Example

I want to study for my ITDEV-117 class, so I will make a session on the app named "ITDEV-117 study session," add the things I need to go over as tasks, like "Finish discussion topic," "Review slideshows," and "Complete practice problems." When I finish typing in all the tasks, I will set a timer for 45 minutes. Every time I complete a task, I will check it off on the checklist. If I finish before the timer or the timer ends, a summary of what was finished will be shown in X amount of time.
